## Izza Zahrotunnisa

### Accounting Graduate from Universitas Gadjah Mada

I am a driven and analytical Accounting graduate from Universitas Gadjah Mada with strong foundations in finance, accounting information systems, and data-driven decision-making. My experience as Accounting Staff at AIESEC UGM, Media Manager at PALMAE FEB UGM, and Lead Unit Treasurer for KKN-PPM UGM 2023 strengthened my skills in financial reporting, process optimization, and cross-functional collaboration, achieving outcomes such as 100% financial compliance. I am currently advancing my data analytics expertise through training and certifications, with proficiency in Power BI, RStudio, SPSS, Looker Studio, and Excel.

# About Company

With roots in the Dutch colonial era, Kimia Farma is one of the biggest and oldest pharmaceutical enterprises in Indonesia. Prior to being nationalized by the Indonesian government, it was known as NV Chemicalien Handle Rathkamp & Co. In 1971, Kimia Farma was formally founded as a state-owned business and subsequently went public.

Kimia Farma, a pioneer in Indonesia's pharmaceutical sector, uses an integrated business model that encompasses the whole pharmaceutical value chain, including clinical services, distribution, production of branded and generic medications, research and development, and retail pharmacies. The company oversees several manufacturing facilities in Indonesia, all of which are certified in accordance with international quality standards and Good Manufacturing Practices (GMP).

The company serves millions of clients every year through its vast retail network, Kimia Farma Apotek, which operates more than 1,300 pharmacies in more than 200 locations. By creating reasonably priced generic medications and increasing access to healthcare services across the nation, Kimia Farma is well known for promoting public health initiatives.

# Project Portfolio

## Project Explanation:

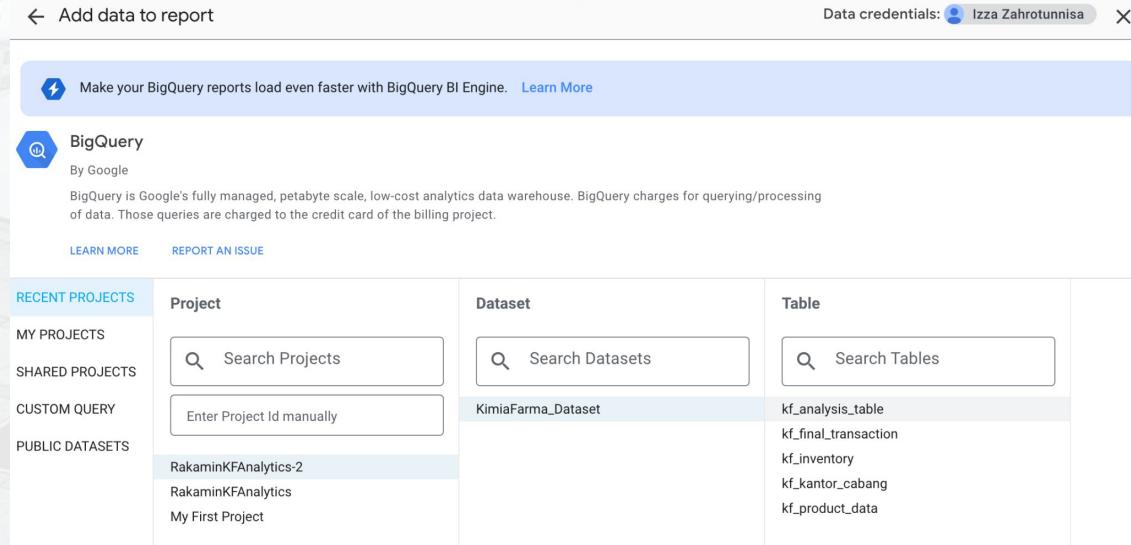

- The project focuses on analyzing Kimia Farma's business performance for the years 2020–2023.
- An analytical table is created in Google BigQuery by aggregating the four imported datasets, containing mandatory columns such as transaction\_id, date, branch\_id, branch\_name, etc.
- The analytical table is connected to Google Looker Studio as the main data source.
- A performance dashboard is developed to visualize key metrics and trends over the four-year period.
- The dashboard design and layout are created creatively according to analytical requirements.
- Objective: To deliver clear insights into financial, operational, and branch-level performance.

Datasets: [kf\\_final\\_transaction.csv](#), [kf\\_inventory.csv](#), [kf\\_kantor\\_cabang.csv](#), [kf\\_product.csv](#)

## Problem Statement:

- Kimia Farma's Year-over-Year Revenue Comparison
- Top 10 Total Transactions by Provincial Branches
- Top 10 Net Sales by Provincial Branches
- Top 5 Branches with the Highest Ratings but Lowest Transaction Ratings
- Indonesia's Geo Map of Total Profit by Province

# 1. Importing Dataset to BigQuery

The screenshot shows the BigQuery web interface. At the top, there's a banner with a lightning bolt icon and text: "Make your BigQuery reports load even faster with BigQuery BI Engine. [Learn More](#)". Below the banner, the "BigQuery" logo is displayed with the text "By Google". A brief description follows: "BigQuery is Google's fully managed, petabyte scale, low-cost analytics data warehouse. BigQuery charges for querying/processing of data. Those queries are charged to the credit card of the billing project." There are two buttons at the bottom of this section: "LEARN MORE" and "REPORT AN ISSUE".

1. Opened BigQuery and created a new dataset in the US region.
2. Imported each CSV as a separate table using “Create table” → “Upload.”
3. Named tables consistently based on filenames and enabled Auto-detect for schema.
4. Set delimiter as comma and used first row as header.
5. Repeated the upload process for all files
6. Checked each table using Preview to verify data accuracy and correct data types.
7. Planned to clean or convert incorrect types (e.g., numbers stored as strings) later via SQL if needed.

1. final analytical table combining transaction, product, and branch data into a complete dataset.
2. Validated data accuracy by checking row counts and NULL values.
3. Verified financial metrics and distribution of net sales and profit.
4. Ran analytical queries to derive key insights: total sales, profit, provincial performance, best-selling products, and branch ratings.
5. Exported the validated analysis table to Looker Studio for dashboard development.

# 4. Performance Analytics Dashboard

## Kimia Farma: Business Performance 2020—2023

Total Net Sales

Rp321.17B

Total Net Profit

Rp91.21B

Total Transactions

672.5K

### Top 5 Highest-Rated Branches with Low Transaction Scores

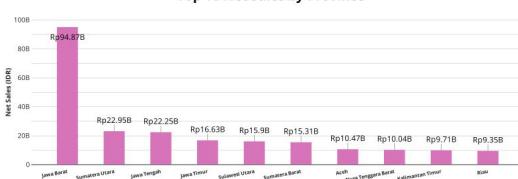

Branch Name	City	Branch Rating	Transaction Rating
1. Kimia Farma - Klinik-Aptek-Laboratorium	Pematangsiantar	4.83	3.99
2. Kimia Farma - Klinik & Apotek	Jambi	4.77	4
3. Kimia Farma - Klinik-Aptek-Laboratorium	Batam	4.73	4
4. Kimia Farma - Apotek	Sorong	4.73	3.99
5. Kimia Farma - Klinik-Aptek-Laboratorium	Gikampak	4.72	4.02

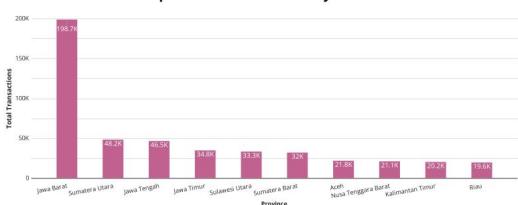

### Year-over-Year Revenue Growth

### Top 10 Net Sales by Province

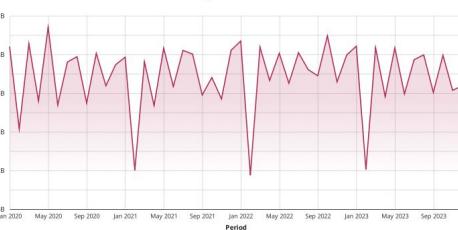

### Top 10 Total Transactions by Province

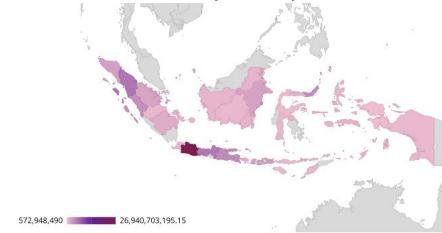

Provinsi  Product Category  Branch Name  Select date range

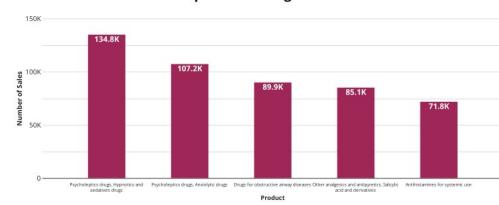

### Monthly Sales Trend

### Density of Profit by Province

### Top 5 Best Selling Products

# Key Insights

- West Java leads in performance, generating ~Rp 94.9B in net sales
- Highest transaction volume also seen in West Java with ~198.7K transactions
- Revenue trends remained stable year-over-year
- Peak revenue in Jan–Feb 2022 at ~Rp 7B
- Lowest revenue in March 2022 at just under Rp 6B
- Psycholeptic drugs ranked as highest-demand product category
- Hypnotic & sedative products recorded ~134.8K transactions

## Conclusion:

West Java remains the strongest revenue driver, with stable but seasonally influenced sales patterns and sustained demand for psycholeptic, particularly hypnotic and sedative products, providing clear guidance for market prioritization, inventory planning, and strategic resource allocation.
